# HEARTWISE

## Research assessment report

Educational demonstration of disease status in the Cleveland dataset. Not a diagnosis, future heart-attack forecast or treatment recommendation.

Report ID: Synthetic A

Assessed: 2026-10-11T23:28:01.202139+00:00 (UTC)

Artifact: hw-8f3c351bc5ead288

## Model output

| Measure | Value |
|---|---|
| Disease-present score | 2.5% |
| Classification | Disease-absent class |
| Calibration | sigmoid |
| Decision threshold | 0.5 |
| Domain status | within_observed_ranges |

Positive class means UCI disease status num > 0. The fixed 0.50 threshold is a research policy, not a clinically validated decision rule. No clinical risk bands are assigned.

Within-range values do not establish support for the complete profile. Individual probability uncertainty has not been quantified.

## Assessed inputs

| Field | Value | Unit |
|---|---|---|
| Age | 54 | years |
| Resting Blood Pressure | 125.0 | mmHg |
| Cholesterol | 240.0 | mg/dL |
| Max Heart Rate Achieved | 155.0 | beats/min |
| ST Depression (Oldpeak) | 0.6 | ST depression |
| Major Vessels Colored by Fluoroscopy | 0 | vessels |
| Sex | Female | Category |
| Chest Pain Type | Non-anginal pain | Category |
| Fasting Blood Sugar > 120 mg/dl | No | Category |
| Resting ECG Result | Normal | Category |

| Field | Value | Unit |
|---|---|---|
| Exercise-Induced Angina | No | Category |
| Slope of Peak Exercise ST Segment | Upsloping | Category |
| Thallium stress-test result | Normal | Category |

## Explanation of this model score

Finite-background permutation Shapley estimate of this model probability; associations, not causes or treatment advice. Correlated-feature combinations may be unrealistic.

Target: hw-8f3c351bc5ead288; scale: probability; background mean: 0.3310.

grouped raw-field permutation Shapley; 16 permutations, 8 development backgrounds, seed 42

| Field (selected value) | Contribution (percentage points) |
|---|---|
| Major Vessels Colored by Fluoroscopy (0) | -9.14 |
| Sex (Female) | -5.52 |
| Thallium stress-test result (Normal) | -4.62 |
| Chest Pain Type (Non-anginal pain) | -3.85 |
| Slope of Peak Exercise ST Segment (Upsloping) | -2.15 |
| Max Heart Rate Achieved (155.0) | -2.05 |
| Resting ECG Result (Normal) | -1.25 |
| ST Depression (Oldpeak) (0.6) | -0.92 |
| Resting Blood Pressure (125.0) | -0.82 |
| Cholesterol (240.0) | -0.67 |
| Fasting Blood Sugar > 120 mg/dl (No) | +0.38 |
| Age (54) | -0.02 |
| Exercise-Induced Angina (No) | +0.00 |

All raw-field contributions are included; inactive encoded categories are not discarded.

Privacy: inputs and this PDF stay in session memory. In API mode, clinical fields and the optional report ID are sent to the configured API. Clear session removes the assessment from the interface; downloaded copies remain with you.

Some characters outside the embedded font are represented by their Unicode code point. Internal retrospective evaluation is not external or clinical validation.
